

assentoft silo

8 pcs. 1.522 m³ silos, the company Havsbrún, Fuglafjørður, Faroe Islands.

In the summer and autumn 2003, Assentoft Silo A/S designed, manufactured and erected above 8 silos for free-flowing grain and fish meal with a specific gravity of up to 900 kg/m³. In order for the silos to "adapt" into the surroundings, the contractor had the galvanised silos painted.

The silos are equipped with a 60° cone, all-welded steel bottom section and a vibration discharger.

On top of the silos, there is a machine deck, which secures the best protection for the transport plant and filters.

Assentoft Silo A/S has also supplied the transport plant (capacity 200 t/hour) and weighing equipment for this plant.

The system is totally tight and safe from moist and pollution from the surrounding.

Diameter:	8,860 mm
Height, silo wall:	25,425mm
Height, total:	35,500 mm
Capacity, each silo:	1,522 m ³ (totally 12.176 m ³)
